ADDITIVES

Additives not meant to vape directly on their own.

10ml - \$4.50

Koolada: A cooling agent that will give a cool feeling to any e-liquid without a menthol flavor. Perfect for popsicle flavors or added coolness to menthol or mint flavors.

Sour: Brings punch to any flavor and can make fruit flavors taste brighter.

SWEETNERS
30ml - \$6.50

Sweetener: This is the fundamental sweetener that will bring a nice, sweet taste to most of your flavor combinations. Some will need the enhancement of Ethyl Maltol. Remember, the more sweetener you use the harder any eLiquid is on coils.

Check with us often for new flavors and come in and check out our many lines of mods, kits, batteries, clearomizers, rebuildables, coil building materials, accessories, and more.

Ethyl Maltol: It's a sweetener, having notes of caramelized sugar or cotton candy. It's nice for enhancing certain flavors, especially fruit flavors and tobacco. Enhances richness and creaminess. Safe to use but use sparingly as too much can mask other flavors in your recipe.

FLAVORINGS

*Not meant to vape directly on their own.
Note: you will use sparingly in your recipes.*

The Human Endocannabinoid System

THC and CBN are known to "fit" like lock and key into network of existing receptors. The Endocannabinoid System exists to receive cannabinoids produced inside the body called "Anandamide" and "2-Arachidonoyl-glycerol". Stimulating the ECS with plant-based cannabinoids restores balance and helps maintain symptoms.

CB1 receptors are concentrated in the brain and central nervous system but also sparsely populates other parts of the human body.
